PEOPLE**

VERY ANDING

HIGH QUALITY INTERNALLY THREADED & PUSHFIT JEWELLERY

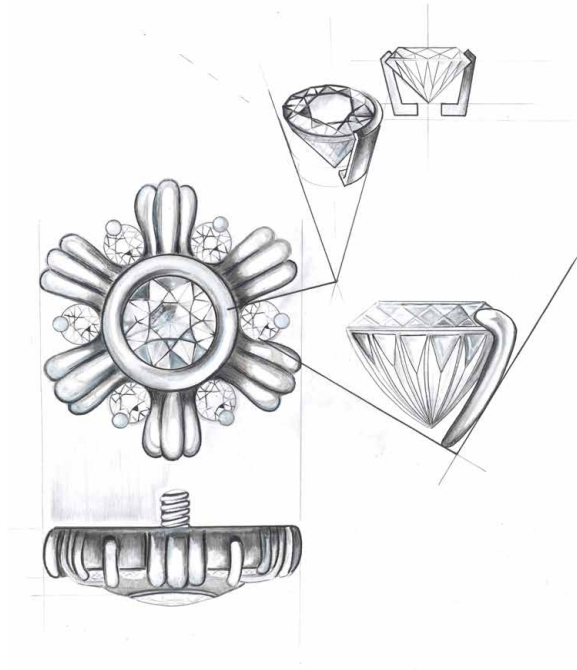

WHERE PERFECTION MEETS EXPERTISE! WE PROUDLY PRESENT: BYCG - THE BEST YOU CAN GET

The BYCG collection was born from our love of elegance and perfection. This exclusive jewellery range reflects the subtle interplay of materials, workmanship and design that embodies our pursuit of the highest possible quality. This jewellery, manufactured in Germany, is captivating, with its contemporary minimalist design, created by a patented production process that conjures up small masterpieces out of newly created titanium. Such pieces of exquisite jewellery not only make customers happy, but also the piercer who works with their fine quality.

**FINE JEWELLERY
FOR OUTSTANDING
PEOPLE**

STUNNING JEWELLERY FOR FIRST TIME USE

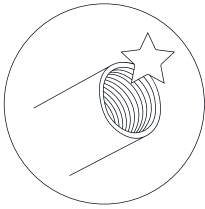

In our jewellery we use the leading supplier of the finest high-quality crystals.

Highly specialised production processes and the finest raw materials guarantee that the crystals are of the highest precision and quality; uniformly beautiful and of unrivalled brilliance.

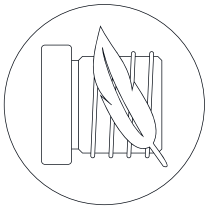

The BYCG collection combines the best features of our whole product range. See for yourself and be inspired by the stylish elegance and easy workability.

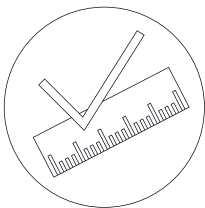

BYCG COLLECTION IN DETAIL

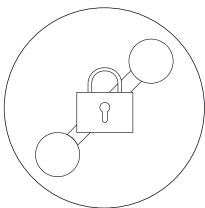

High-precision internal threading: We use high-quality machines from the medical industry to create a particularly precise thread for the perfect connection of stem and attachment.

No sharp edges: The edges of our threads are soft yet precise, preventing injuries when inserting and removing the jewellery.

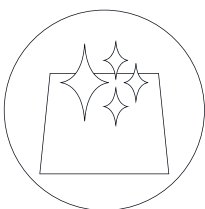

The perfect length: Doesn't exist? But there is 'perfect' for threads! The ideal length prevents the rod and attachment from separating too easily, as well as unnecessary long rotation.

Lock Tight System: Never lose a ball again! Thanks to the slightly tapered thread, the last turn provides a solid fit for the ultimate hold.

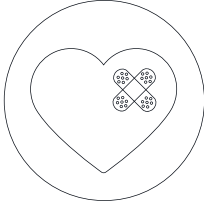

Trouble-free screwing: Easy and fast, with that perfectly engineered feeling, both for piercer and customer.

Surface refinement: The patented TiGlo process developed by Wildcat refines titanium, to a higher level of shine, which otherwise appears rather dull.

BYCG[®]

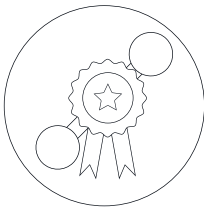

BEST YOU CAN GET

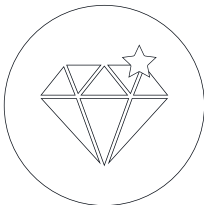

Polished surface: The extremely smooth surface texture protects the wound canal, preventing bacteria from settling on the material and thus promotes a quick and natural healing process.

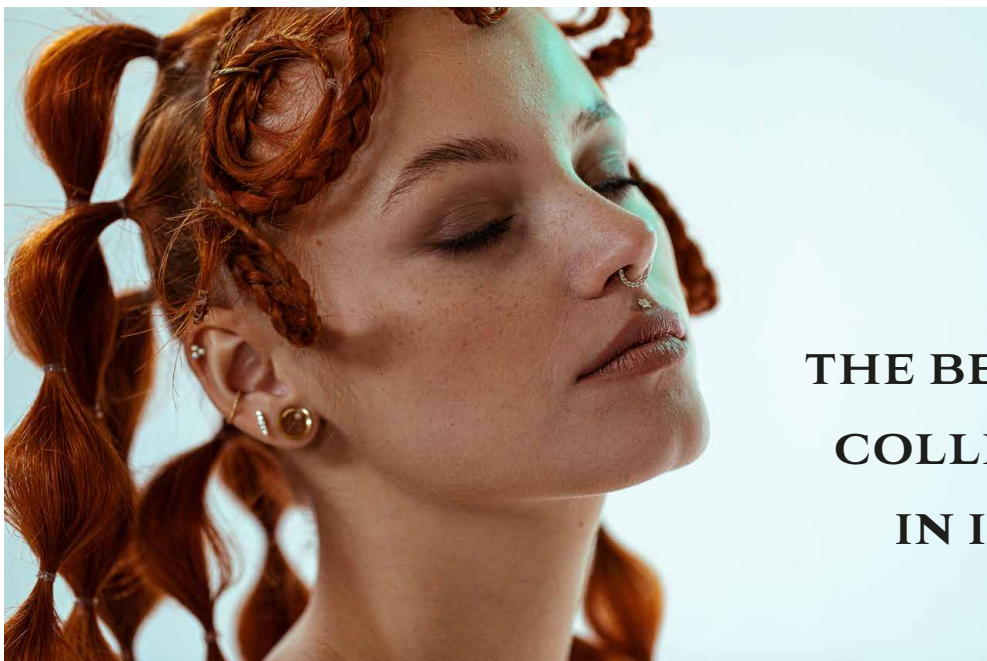

DIN Certified: All BYCG products are produced in our DIN ISO 13485 certified production facility in Germany - from start to finish.

Product Control and Quality Consistency: Detailed and certified processes within the production process guarantees the high standards expected by our customers and ourselves.

Breathtaking first insert: The finest crystals from the World's leading suppliers complete each exquisite piece of jewellery.
